

## Bluebells

Bluebells flower from late April to May, filling our woods with their incredible flowers and fragrance and providing nectar for moths, bees and butterflies.

### **Planting Instructions:**

Plant at least twice the depth of the bulb, 15cm (6in) deep and 15cm (6in) apart, with the pointed up upwards. Bluebells should be planted as deeply as possible, 4 ins being the minimum, and more if possible. In nature they are often found over a foot beneath the surface of the soil!
